

Leo R. Cullinan, DDS, MS

Board Certified Orthodontic Specialist

Diagnostic Services/Second Opinion

One of the most important aspects of successful orthodontic treatment is the initial consultation appointment where critical information is gathered. Our state-of-the-art digital panoramic and cephalometric radiology equipment is designed to minimize exposure and provide the highest quality, diagnostic images. Each lateral cephalometric x-ray is digitized for an accurate and complete cephalometric analysis. Together with clinical photographs and a thorough clinical examination, a comprehensive treatment plan can be developed and presented to our patients/parents.

Our diagnostic services are also extended to those patients seeking a second opinion. A second opinion can help you make an informed, confident decision about your orthodontic care. Sometimes, you may find out about treatment options you didn't know were available. And in some cases, the information you gain during a second opinion consultation can even change your diagnosis. We are committed to providing you with the answers you need and peace of mind you deserve.
